

CATALYZER™

PATENTS PENDING

CATALYZER™

CATALYZER™, the ultimate machine for the post-cat user. After years of development, C.A. Technologies has introduced the **CATALYZER™** pump, which saves money by mixing only the amount of product necessary for any job and reduces solvent and labor costs with fast flush using only ounces of solvent rather than gallons. The **CATALYZER™** pump eliminates rework labor due to inconsistent mixing ratios. This allows any pre-cat user to easily convert to a post-cat product saving money and providing a higher quality, more durable finish. The **CATALYZER™** is the first 2K unit priced for small to medium wood finishing shops. The perfect companion for all M.L. Campbell 10:1 post-cat products.
